

**AMENDMENTS TO THE SPECIFICATION:**

Please replace paragraph [0019] on pages 6-7, with the following paragraph:

[0019] Switch 50 comprises button 52 and arm 54 as shown in Figures 1 and 4. Arm 54 is recessed from front surface 20 of cover 18 so that overlay 12 may be adhered to cover 18 and not interfere with movement of arm 54. As shown in Figure 4, buttons 52 are integrally formed with posts 58, which extend perpendicularly to arms 54 from backside 22 of cover 18. Opening 200 extends along arm 54 and button 52 as shown. As shown in Figure 5, arm 54 is flexible relative to cover 18 along curve Z. In resting position post 58 is at unactuated position A, a position where post 58 is not in contact with switch 90. However, when button 52 is pressed in the direction of arrow P arm 54 flexes along curve Z to position B, a position where the post 58 is in contact with touch switch 90, to thereby actuate touch switch 90. Arm 54 returns to its original position in the direction of arrow Q when button 52 is no longer depressed.
